I can't remember when I first heard the term "intrapersonal", but it made the most sense. It seemed like a pretty cool concept. Of course, it didn't take me long to find out that, "intrapersonal" has a different meaning in other contexts. For example, there are some definitions of "intrapersonal" which lead to somewhat negative connotations. In fact, there are so many definitions of "intrapersonal", that a couple of years ago I tried to google it and ended up on a page listing the most popular definitions of the word "intrapersonal". I find it interesting that when we talk about intrapersonal we usually focus on that aspect of ourselves that we're most comfortable with (or is it most comfortable?). But for those of you who're not really sure what I'm talking about, here are some examples of intrapersonal.

- Paying attention to the needs and thoughts of your fellow workers
- Being able to say "no"◆
