History The term CAD (Computer-Aided Design) was coined in 1960 by Esterline Corporation in an attempt to distinguish their product from other drafting applications, which were often termed DASH (Drafting for Amateur/Self-Teaching). Esterline CAD ran on a primitive graphic display terminal. CAD was a major factor in the expansion of the computer industry in the 1960s and 1970s. From an early date, CAD products had a market segment of firms that provided CAD products, but did not sell them directly to users. Early CAD evolved from the use of electronic drafting apparatus and hand drafting techniques to produce drawings by drafting operators working at multiple drafting tables, such as those in the drafting offices of the Nippon Kogakuin (Nissan). A hand-drawn line diagram was usually transferred onto film and used as a blueprint, although in some cases, sheet metal stampings were made by hand to be displayed on an electronic plotter (or "line printer") to create a blueprint. Using a drafting table, the operator would draw on a clean sheet of paper and then transfer the drawing to the stamping table to produce the stamping. The first industrial CAD program was developed by the Japanese electronics company, Nippon Kogakuin (Nissan), in 1969. The first AutoCAD Free Download was created in 1982 by Autodesk. In 1962, the Japanese electronics company Nippon Kogakuin (Nissan), joined forces with other Japanese companies to form the Information System Development Company (ISDC) in order to develop software products for the new generation of computers. In 1969, ISDC began developing the first CAD program, and in 1977 the company released AutoCAD. The software came with a long list of possible drafting axes, from the traditional ones of X, Y and Z, to linear (distance), angular (angle) and raster (graphics) axes. The most common of these are X and Y, the coordinates that direct the drawing on the X and Y axes. By the end of the 1980s, the term CAD had become established as a synonym for the product that makes a computer the tool of the draftsman. Market and sales In 1984, when AutoCAD was introduced, there was a relatively small number of desktop computers with graphics capability. However, the number of companies who market AutoCAD and other programs has grown and it

By Dr. Charles Price The president is suing the State of Maryland for taxes, you say? That's so 1960. These days, America's 45th president is suing the federal government. Donald Trump's Justice Department filed a suit against Maryland and other states today (3/2) charging that the states are violating the Constitution by not collecting their fair share of federal taxes from Americans. Funny how this tactic is now legal. ca3bfb1094

ARCC 22 - Designing and Evaluating Evidence-Based Addiction Interventions for Different Populations. Addiction research, treatment, and policy have traditionally focused on the white, middle-class male population as the prototypical "addict." Yet the contemporary and future target populations will likely comprise not only people of varying sexual orientations and gender identities, but also people of color, poor and minority populations, and other historically disadvantaged groups who may be overrepresented in the substance use disorder population. Despite the substantial implications for treatment, this new focus has yet to be adequately addressed in the behavioral and medical sciences. The present course will bring together experts in the social and behavioral sciences, addiction medicine, and public policy to present, critique, and discuss current research on addictions as they relate to diverse populations. The objective is to provide a forum to evaluate the existing research on factors affecting a positive response to addiction treatments among different populations, including African Americans, Latinos, and other racial and ethnic minority groups, and gender and sexual minorities, while highlighting gaps in the knowledge base. To foster discussion and critique, the goal is to ultimately contribute to improving the addiction treatment system by demonstrating the
