I used a tutorial on your site and got the code right there. It is however in WordPress 3.6 and the new version is 3.7.3 - so I did my research and I replaced the code from wp-includes/ms-functions.php which seems to be a mess. But my theme is not working anymore. I get the following error when I open my custom themes: Call to undefined function get\_multisite\_blog\_active() in C:\wamp\www\SupriaTheme\application\theme.php on line 30. I tried to find any solution but couldn't find any. I'm using XAMPP for windows. Hope anyone can help.

powerful software, a low price, impressive features. cubase vst32 is a great bargain, and with the addition of the oms studio setup, its the perfect entry-level daw. the program is a great place to start your musical adventures, and even if you move on to something more advanced, the oms studio setup is a great piece of equipment that will have you well prepared. in addition to the new features, this version of cubase includes a new interactive audio mixer with an easy-to-use, streamlined interface, unlimited track channels, a separate music keyboard track with in-spectrum effects, and a real-time effect ladder. also included are a quick-launch bar with integrated transport and mixer controls, a monitor mode for previewing your audio files, import and export of wav files, and import and export of the waveform audio data (wad) format. most of the new features are seamlessly integrated into the cubase interface, which is designed to work in an easy-to-use manner and feature a streamlined layout. the real-time effect ladder is designed to allow the user to create different effects from a single point, instead of having to use multiple tracks to implement the effects. the two new monitors have been redesigned to be much more effective than previous versions. they display both the waveform and spectrum views. the new monitor tracks work like regular tracks, but track a waveform and spectrum simultaneously, providing the user with a single interface to work with. the monitor view is applied to the current track and is saved with the audio file for later. the new collaborative mixer is designed to make working with audio in cubase much easier and fun. the mixer lets you use the instruments and effects on each track simultaneously to achieve a unique sound. the mixer also contains all the standard effects, but each effect can be assigned to its own track to achieve a specific sound. the mixer also features a built-in cross-fader. the new track-based keyboard has been designed to allow musicians to work on a different track from the one they are tracking. the track-based keyboard automatically lets you switch to your track-based keyboard, which is accessible from the main cubase window. the keyboard features a real-time effect ladder, separate faders, and a separate music keyboard. 5ec8ef588b
