For web designers, there's a new web design mode called Streamset—a design system for starting, crafting, and publishing web experiences. Streamset works by intelligently selecting the best image and adding items to align text, images and video. It then performs motion effects and creates navigation, so you're free to move along (no JavaScript knowledge required). What are the apps that every graphic design person should know about? There are probably thousands, but here are ten that I find useful for common tasks. I'm sure I missed some, so please share yours in the comments. Pixelmator was launched in 2005 and is one of the most intuitive graphics design apps available. While it lacks the design options at the interface level of Adobe Illustrator or Corel Draw, it is amazingly fast. Got a request for a 1000×1000 image? The app will do it for you in under a second. I much prefer it to Photoshop. Axure RP is a great tool for graphic design teams that wants to use a Web browser. The company cites its focus on business process as one of the reasons for its popularity. It is a fantastic tool for delivering the look of a project in a browser-based interface. It doesn't have the same design options as Adobe Photoshop Products but I am a big fan of it. Logicapp is a web-centric WYSIWYG editing tool that is designed for crafting content in a browser. It has a number of powerful features for content creation, such as 'create' content by drilling down on a browser from a document, image or video. It is easy to use and has a simple approach to web design that sets it apart from the more complex WYSIWYG and graphic design tools like Photoshop.

Adobe Sensei is the intelligent, AI-driven assistant that makes Photoshop even easier to use for all users. The innovations offered by Adobe Sensei improve the accuracy and quality of selections, while streamlining the process of editing images. By simply asking questions about the selection itself, Adobe Sensei can significantly improve accuracy and quality, helping users to achieve results that would otherwise only be possible with a large team of skilled professionals. Another new feature of Photoshop available today, and also introduced in Photoshop CC and Lightroom CC, is the Slideshow feature. This feature allows users to embed fully interactive images and videos in a slideshow with some additional controls that can be accessed using a keyboard shortcut. For photos and other graphics, Elements offers a lot of the same tools as Photoshop, but it's not as feature-laden as the full-feature Photoshop. Still, it can handle the basics of photo editing if you're an absolute beginner. "It's been a privilege to work with the creative community for more than 30 years," said Shantanu Narayen, CEO and President, Adobe. "The industry is built on the power of collaboration and the creative community has created some of the most iconic art and design works in history with Photoshop. The most successful way for creators to share and work together is to seamlessly share work on the web, whether that's as a designer browsing a portfolio, a photographer posting a photo, or a videographer posting a project. With the new features in Photoshop CC 2019, we're bringing the power of collaboration from the desktop to the web."
