InjectTunnel Crack + Activator For Windows

- Easy to use and powerful overclocking utility!
- Quickly boost GPU memory clock frequency
- Quickly boost GPU core clock frequency
- Quickly boost GPU memory clock frequency
- Quickly boost GPU core clock frequency
- Controls fan speed of graphics card
- Quickly boost the GPU frequency and memory clock frequency to reduce power consumption
- Quickly boost the

What's New In InjectTunnel?

Fast graphics card performance control and fan speed. This little utility runs in Windows Vista or Windows XP.

InjectTunnel uses the native Overdrive interface from ATI Catalyst display driver to change core and memory clocks for 3D full-screen or 3D desktop modes. System Requirements: Windows Vista or Windows XP SP1. Latest available ATI Radeon Driver 7.1.0 (this utility does not run on older ATI graphic cards). Minimal video memory 2 GB. You can use it for 3D gaming or

graphics applications. How to install:
Download and install ATI RADEON HD 4300 graphics driver. Unzip the file, use whatever you like and then put the InjectTunnel.exe file in your main program directory. Double click the program icon to run it. Interface: - To start the program simply click the Launch program icon. - At the screen that appears press one of the three buttons at the bottom of the interface. - Now InjectTunnel shows the main window where you can set the main parameters of the utility. - Set the following parameters: - 1. Core Clocks: You can control the core clocks of your graphics card (this will impact the 3D

performance of the card). Just click the Core Clock left-right (or up-down) control buttons to choose one of the following core frequencies: 30, 40, 50, 60, 75, 85, 95 and 105 MHz. To cancel all settings press the Restore Defaults button. - 2. Memory Clock: You can change the memory clock of your graphics card (this will affect the overall performance of the card). Just click the Memory Clock left-right (or up-down) control buttons to choose one of the following memory frequencies: 5, 7, 8, 9, 10, 11 and 12 GHz. To cancel all settings press the Restore Defaults button. - 3. Fan Speed: You can control the fan speed of the graphics card (this

will affect the fan noise). Just click the Fan Speed left-right (or up-down) control buttons to choose one of the following fan speed settings: Off (all fans shut down), Low (quiet but slow), Medium (medium speed) and High (fast but loud). - 4. PCI-E Clock: You can set the PCI-E clock for your graphics card (this will affect the overall performance of the card). Just click the PCI-E Clock left-right (or up-down) control buttons to choose one of the following PCI-E bus widths: 32 bits (latest PCI-E standard), 64 bits and 96 bits. - 5. PCI-E Bus Width: You can set the PCI-E bus width for your graphics card (this will affect the overall performance of the card).

Just click the PCI-
