Tile 3D is a mobile app designed for users to build detailed models of rooms, filled with realistic interior design elements. The app lets users create their dream rooms with the ability to easily import existing objects from a large database of modern furniture, decorative elements, textures, flooring options and more. A wide variety of room designs and realistic animations can be created, showing off the objects placed inside the room in different ways. Users can then preview their model using the app's user interface, or output to PDF or HTML, and share it on different social media platforms such as Facebook, Twitter, Tumblr and Google+. The app uses real-time modelling technology, to let users drag and drop objects, collimate and move them around in a room, creating

their perfect model. Users can also alter the view of a room by rotating and moving the camera around to see the interior and exterior. With the ability to generate real-time images of a room in different views, users can preview their design or use it for marketing and selling purposes. Tile 3D offers the option to connect to a huge database of free 3D textures, materials and models, to let users create the best results. Homeowners can search for items in the database, such as a wooden chair, window blinds, an oven, a kitchen sink, a table or a wooden door. Users can also download or upload their own objects for use in their rooms. The app is easy to use and doesn't require any knowledge of 3D modelling. With its intuitive interface, users can easily create their perfect rooms, with the ability to import existing objects from a large database of modern furniture, decorative elements, textures, flooring options and more. In addition to a complete interior design function, Tile 3D offers users the ability to output to different formats, including PDF, HTML, PNG and JPG. In the future, the developers are planning to add the ability to 3D print the room design. *Desktop Screen Recording *Automatically adjusts itself to fit the screen *Rotate the camera to see the interior and exterior of the room. *Link to Google Maps to provide an accurate virtual view of the house/apartment *Export a Google Drive link *Able to save files for viewing offline. *Can be used offline and on all mobile platforms, including Android, iOS, Windows and BlackBerry *Save floor plans for future reference *Homeowners can also share their plans via social media, including Facebook, Twitter, Google+, Pinterest and Tumblr *Added intro and tutorial videos for beginners *Added advanced function of printing the room layout *Added ability to sort rooms by attributes *Added ability to sort rooms by room name *Added ability to edit objects *Added ability to import objects from the database *Added ability to create objects *Added ability to preview the interior/exterior
