With Ultimate Flash Drive, it's easy for you to backup and restore all flash drives, and it's also easy to identify the flash drives on your computer. When you want to create a backup, you just need to select the flash drives you want to backup. Then you click the Start button to create the backup in a short period of time. When you want to restore, you need to select the flash drive you want to restore from the drop-down list and click the Start button to restore the backup. It's proven, high quality and guaranteed to make your PC running better. Ultimate USB Disk Maker is the easiest way to backup and restore your USB drives. It's designed

Ultimate Share Scanner

* Ultimate Share Scanner is a Java-based tool to scan a PC's shared resources. * It is free and can easily handle both Windows OSes as well as Linux or Mac OS. * It can automatically look for a file share and extract its contents. * What you see in the GUI is pretty much what you get. There are no hidden features or commands. * It can scan up to 500 shares at once and can even map the shares to drives in the computer. * Another difference is that the software is built on Python. That means that it is easy to be customized. * If you ever start thinking that there is something that can be improved, you can always open a bug report and make a suggestion. Features: * Extracts the contents of the shares and opens the data * Runs for Windows, Linux and MAC OSes * Easy-to-use GUI * Finds the first available share in the network * Can map the shares to drives on the computer * Can search for shares that start with specified string * Can search for all shares that start with specified string * Shows information about all shares on the screen. * Shows a list of all shares on the computer * Can find any file on the shares with specified extension * Shows the groups that all shares in the computer belong to * Shows when a share was last modified * Can look for the specified share at the specific time. * Can get information about the user who owns the share. * Can search for the specified share. * Can get information about the share. * Scan time optimization * Can scan for 1 share or 500 at once. * Can scan for 1 share or all at once. * Can search for specific files and folders on all shares. * Shows all file names and folders that can be found on the share * Can search for file names that contain specified strings * Shows information about the share as well as the shares that belong to it. * Shows the group that is attached to the share * Shows the computer name and IP address of the host that owns the share * Shows the computer name that is on the same network as the share * Shows the share name and the drive on the computer that is on the same network as the share * Shows the file name of the share and the file names of all folders in it * Shows the file name of the share and the folders that contain b7e8fdf5c8
