Getting the Most out of the Experience Photoshop is a raster image editor, so you can work in any coordinate system—pixel-based or metric. You can use any image type: TIFF, JPEG, PNG, or GIF. While images can be pixel-based, you have the option to choose to work in either a pixel-based or the more traditional frame-based coordinate system. Working in the pixel-based system works well with a screen with a pixel-based resolution that is larger than the image you are working on. The frame-based coordinate system is still a popular choice among print artists and photographers who use a large-format or 35mm film camera. There are two methods for working with these images: You can drag the image around in Photoshop to show the areas that you want to work with, or you can add guides to help keep track of the edges of the image. Add guides by choosing the New Guide option from the toolbox menu and you can simply drag from the edge of your screen to keep track of a guide that indicates the image edges. In Figure 1-8, the edges of the image are indicated with guides on the left side of the screen. **
