Contrasting effects of granulocyte colony-stimulating factor on neutrophils and monocytes. The effect of granulocyte colony-stimulating factor (G-CSF) on the human neutrophils and monocytes was studied. Phagocytosis of *E. coli* was enhanced by G-CSF in contrast to the phagocytic activity of neutrophils and monocytes in the presence of serum. The phagocytic activity of monocytes was also enhanced by granulocyte-macrophage colony-stimulating factor (GM-CSF). In the presence of G-CSF, the morphologic change associated with the adherence to the coated surface of a polystyrene plate was inhibited. The shape change accompanied the early aggregation and adhesion of the cells to the coated surface. These results suggested that G-CSF induced the morphologic change accompanied by the adherence to the surface and subsequent aggregation in the monocytes. On the other hand, G-CSF enhanced the motility of neutrophils and monocytes. This migration was not inhibited by G-CSF and enhanced by GM-CSF. These results suggest that G-CSF induces the morphologic change in monocytes, but that G-CSF and GM-CSF have opposite effects on cell migration.Q: Create div with php - não importa quem colocou Boa tarde! Estou desenvolvendo um site e preciso fazer o seguinte e não sei onde está o problema, estou pegando os elementos do banco de dados e inserindo em uma div e o nome da pessoa, aí ele deveria pegar o nome do usuário e mostrar o nome dele, só que são todos podres, nenhum deu certo, me deparei com aquele problema e sempre alguém me resolveu. Eu estou fazendo isso porque eu tenho um link que pega tudo que eu quero e insira na div do site. `var xmlDoc=null; xmlDoc = getXmlDoc("login.php"); // var xml = ""; if (xmlDoc) { // se o arquivo existe var x = xmlDoc`

### What's New in the?

1. Field of the Invention The present invention relates to a press forming method of a deep drawing workpiece by using a die, and more particularly, to a method of forming a deep drawing workpiece having a reinforcing portion at a predetermined position. 2. Description of the Related Art In the conventional deep drawing workpiece, when a deep drawing workpiece is formed with a reinforcing portion, a jig mechanism is employed to form a deep drawing workpiece having a reinforcing portion at a predetermined position. The conventional deep drawing workpiece is formed by the step of supplying a workpiece sheet to a die cavity of the die, the step of closing the die cavity by a ram and the step of holding a die end portion from which the workpiece sheet is separated from a tool end portion of the die with a tool holding unit and moving the die end portion in a direction approaching the tool end portion. The die end portion is held with the tool holding unit at a predetermined position, and a tip end of the workpiece sheet is positioned at a deep drawing position on a die side by the predetermined position. The die cavity is closed by the tool end portion and the workpiece sheet, and after the die end portion contacts a deep drawing surface of the workpiece sheet, the die cavity is opened by the ram to form a deep drawing workpiece. However, in the conventional deep drawing workpiece, the reinforcing portion is formed only with the deep drawing workpiece having a thin plate thickness; the deep drawing workpiece having a thick plate thickness is not formed. To form a workpiece including a reinforcing portion, there is provided a reinforcing portion forming method for forming a workpiece having a thick plate thickness by using a die having a deep drawing surface with concavities and convexities corresponding to the reinforcing portion and a tool end portion in a same stroke of the die (for example, see Patent Document 1). [Patent Document 1] Japanese Patent Application Laid-open No. 2004-30861 However, since the reinforcing portion forming method disclosed in the Patent

---

Document 1 is performed by using a die with a deep drawing surface, it is difficult to perform the deep drawing workpiece having a thick plate thickness. Thus, there is a problem in that a method of accurately forming a deep drawing workpiece having a reinforcing portion at a predetermined position is not provided, and it is necessary to form a deep drawing workpiece having a reinforcing portion at a predetermined position by using a die having a deep drawing
