Figure 17-8: Photoshop enables editing based on layers. The original photo of the wall with the hole created using the Content-Aware Fill tool.) ## The CC and CS Versions The Creative Cloud offers different levels of Photoshop functionality depending on the plan a customer chooses. In addition to the new features added with Creative Cloud, Photoshop is now a program that sells itself on the ability to provide the most advanced version of the software to the customer. In other words, Photoshop CS6 equals Creative Cloud CS6. Both versions include most of the tools in Photoshop.

Photo by Juergen Flückinger. Despite an older name, Photoshop Elements is part of Adobe's Creative Cloud, and comes preinstalled on more recent systems than the full version of Photoshop. Photoshop Elements (and its predecessor Photoshop 6.0) are currently in the 9.0.x and 10.x series of releases, and have been available for download for over a decade. Their most recent version is Photoshop Elements 11, released on August 2nd, 2017. This guide gives an overview of the editing features of Photoshop Elements 11. Detailed guides on the older Photoshop Elements versions can be found here and here, and guides on newer versions of Photoshop, including Photoshop CC, also exist. See the links at the end of this guide for a comprehensive listing of guides to Photoshop. Contents Definitions and versions Photoshop Elements has a different version numbering scheme than Photoshop, Photoshop Elements, or Photoshop. Photoshop Elements has been the name of the software since its release as Photoshop 6.0, and has been the versioning scheme to this day. Photoshop has continued to use the major number scheme, whereas Photoshop Elements is simply the version number of its software. However, Photoshop Elements is always referred to as "Photoshop Elements", and has its own set of naming conventions. As of version 7.0, Photoshop Elements and Photoshop have the same version number scheme. Version numbering Unlike Photoshop, Photoshop Elements is versioned. The version number only represents the engine version, not the patch levels, which are always the same. Versions of Photoshop Elements are numbered in the 9.0.x and 10.x series. The most recent version is Photoshop Elements 11. You can download it here. Development cycle Photoshop Elements development is much like Photoshop development. The most recent versions of Photoshop Elements will always be released when Photoshop is also released, and will not have major delay. Compatibility Photoshop Elements is no less compatible with recent versions of Photoshop as any other component of Adobe Creative Cloud. If your computer came with Photoshop Elements installed, it is recommended to activate the Creative Cloud desktop application. Camera Raw Camera Raw is the raw editing functionality in Photoshop Elements. It can both process raw files and edit pre-processed files, commonly referred to as JPGs. It can also be used to work on other digital photo editing applications, such as Lightroom and Adobe Photoshop. 05a79cecff

Q: mod_rewrite not working I have a small php application on my web server. After the website has been running for a few weeks, an update to the file system might have deleted the contents of the file application/index.php. I am working on a remote server using Dreamweaver and the error occurs when trying to access the website by typing in localhost/my-site/ I first deleted the application directory and then reloaded the page in Dreamweaver. I then used the following code in my.htaccess file: RewriteEngine on RewriteCond %{REQUEST_FILENAME}!-f RewriteCond %{REQUEST_FILENAME}!-d RewriteRule ^(.*)$ /application/index.php [L] I then checked in the apache error log and I see the following error: AH00124: Request exceeded the limit of 10 internal redirects due to probable configuration error. Use 'LimitInternalRecursion' to increase the limit if necessary. Use 'LogLevel debug' to get a backtrace. I tried clearing the.htaccess file in my document root, but no change. Is there a better place to put the code? A: Try using these directives RewriteEngine on RewriteBase / RewriteRule ^(.*)$ application/index.php [L] Because, as you can see from the comments, none of the other directives are actually affecting the rewrite engine. I'd also suggest using a more semantic URI, like www.example.com/my-site/ Instead of www.example.com/my-site/ In general, if you can do this, you will be much more easily able to tell what parts of your URL are significant and what parts are part of the host. The user has no access rights in sharepoint designer, but he can edit and create new sharepoint list items as the owner. When he creates a new item in the sharepoint list, he gets an error message telling him that the item was created, but the item is not visible in sharepoint designer. I suspect that the error is because the admin user is the owner of the workflow and isn't able to create items in sharepoint designer. Can I change something in the workflow that grants the user
