Thirty-six patients with Barrett's esophagus were randomly assigned to two different treatments. The treatment with the slow-release form of ranitidine (2.5 g/day, test group) was started 2 weeks before surgery and continued for 1 year, with 3-month intervals. The control group received standard treatment. Gastroesophageal reflux disease was assessed with a symptom score, endoscopy, and 24-h ambulatory pH monitoring. Eradication of reflux symptoms occurred in 12 patients in the test group and in two patients in the control group (P = 0.005). Before being able to use the stencils in Visio, it is necessary to activate them. Some stencils offer the possibility of including a code or URL that the user can import into the drawing and that will allow Visio Electrical to access the right data related to the product. This tool has been designed to integrate perfectly with Microsoft Office, so many of the stencils can be inserted into a PowerPoint presentation or an Excel spreadsheet. This allows the user to prepare certain presentations at a later stage and then design the appropriate type of wiring diagram in Visio. If the user wants to show other employees their work, he can export the project in a .zip archive and send it to them through email. Moreover, Visio Electrical allows the user to make presentations in screen sharing mode and to integrate drawings and other types of files in a browser using an iframe. The user can also make use of annotations to insert specific information into a project or to add comments about a specific area of the drawing.
