series object, based on a whole year I have looked at some similar questions asked and they were all time series objects. I have a
simple requirement that a new object (which I'm not really familiar with how to describe so please bear with me) has to be like a
new year object. For example the data could be like this: Year: Date: 1890-01-01 1891-01-01 1890-02-01 1891-02-01 etc I
want to create a new object that consists of the first four months of 1891, so the output for this should be like this: Year: Date:
1890-01-01 1891-01-01 1890-02-01 1891-02-01 etc I thought I could do this by converting the two date columns into datetime
objects, then do some fancy math on it to add the months. Is there a more pythonic way to accomplish this? Thanks! A: Try this:
year = pd.DataFrame({'Year': [1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998], 'Date': ['01-01-1990', '02-01-1990',
'03-01-1990', '04-01-1990', '05-01-1990', '06-01-1990', '07-01-1990', '08-01-1990', '09-01-1990']}) year[0].assign(year =
year.Date + '-01- 3e33713323
