once you've mixed in mixbus, you can begin to explore the true potential of your project. the on-board intelligent beat detector enables precise and elegant, tapeless rhythm section detection, and rhythm section editing - all without ever adding a pad. alternatively, you can use the free beat detector tool to analyze the beat content of your project, and then use on-

board beat analysis and automatic beat matching to match your project to the beat of its original recording. beat detection doesn't stop there. after you've got your session locked down, the seamlessly integrated beat editor enables editing of rhythm sections without ever having to add a synth or a pad. this is possible by using built-in input/output audio routing, and the intuitive beat editor makes it easy to adjust rhythmic elements such

as tempo, beats per minute, and sync settings. mixed in mixbus, your project sounds and looks beautiful. the on-board manage waveforms window lets you edit and view waveforms so you can see the recorded signal with clarity. the included vst instrument editor tool lets you easily add audio plugins for further expansion. harrison's universal mixing concept ensures that mixbus is ready to work with virtually any type of music, no matter the genre,

whether you're a drummer, guitarist, bassist, keyboardist, singer, or a composer. in fact, the system comes with a complete music production system that gives you full control of all aspects of your recording session. you can also mix and work with the image of the source files as they are recorded. the versatile instrument/effect panel lets you use the included virtual instruments, effects, and system instruments to create

variations on your project. all these features come together to ensure that you have complete control of your project while working in a true analog mixing environment. 5ec8ef588b
